Serial No. 09/713,166

## AMENDMENTS TO THE CLAIMS

## 1-18. Withdrawn.

- 19. (Currently Amended) Process for production of tissue paper comprising adding a paper wet strength resin or agent, comprising a <u>crosslinked</u> cationic nitrogen-containing polymers having hydrophobic side-chain substituents containing up to 40 carbon atoms, to an aqueous cellulosic suspension.
- 20. (Original) Process according to claim 19, wherein the paper wet strength resin or agent is added in an amount of from about 5 to about 50 kg/tonne dry cellulosic fibres.
- 21. (**Previously Amended**) Process according to claim 19, wherein the paper wet strength resin is added in an amount of from about 15 to about 50 kg/tonne dry cellulosic fibres.
- 22. (Original) Process according to claim 20, wherein the paper wet strength resin is added in an amount of from about 25 to about 50 kg/tonne dry cellulosic fibres.
- 23. (Original) Process according to claim 20, wherein a dry strength agent is added in combination with the paper wet strength resin or agent.
- 24. (Original) Process according to claim 20, wherein the produced tissue paper has a grammage lower than about 70 g/m<sup>2</sup>.
- 25. (Currently Amended) Tissue paper comprising a paper wet strength resin or agent comprising a <u>crosslinked</u> cationic nitrogen-containing polymers having hydrophobic side-chain substituents containing up to 40 carbon atoms.
- 26. (Original) Tissue paper according to claim 25, wherein the tissue paper comprises a paper wet strength resin or agent in an amount from about 5 to about 50 kg/tonne dry cellulosic fibres.

- 27. (**Previously Am nded**) Tissue paper comprising a paper wet strength resin or agent obtainable by a method according to claim 19.
- 28. (Previously Added) Process according to claim 19, wherein the hydrophobic sidechain substituents contain 6-40 carbon atoms.
- 29. (Previously Added) Tissue paper according to claim 25, wherein the hydrophobic side-chain substituents contain 6-40 carbon atoms.
